(التوجيه) Mentoring

Session (2)

18/02/2021

7:30 PM (Cairo Time)

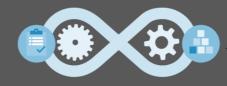

Technical Skills (DevOps)

(عربی) Arabic

Mohamed Radwan

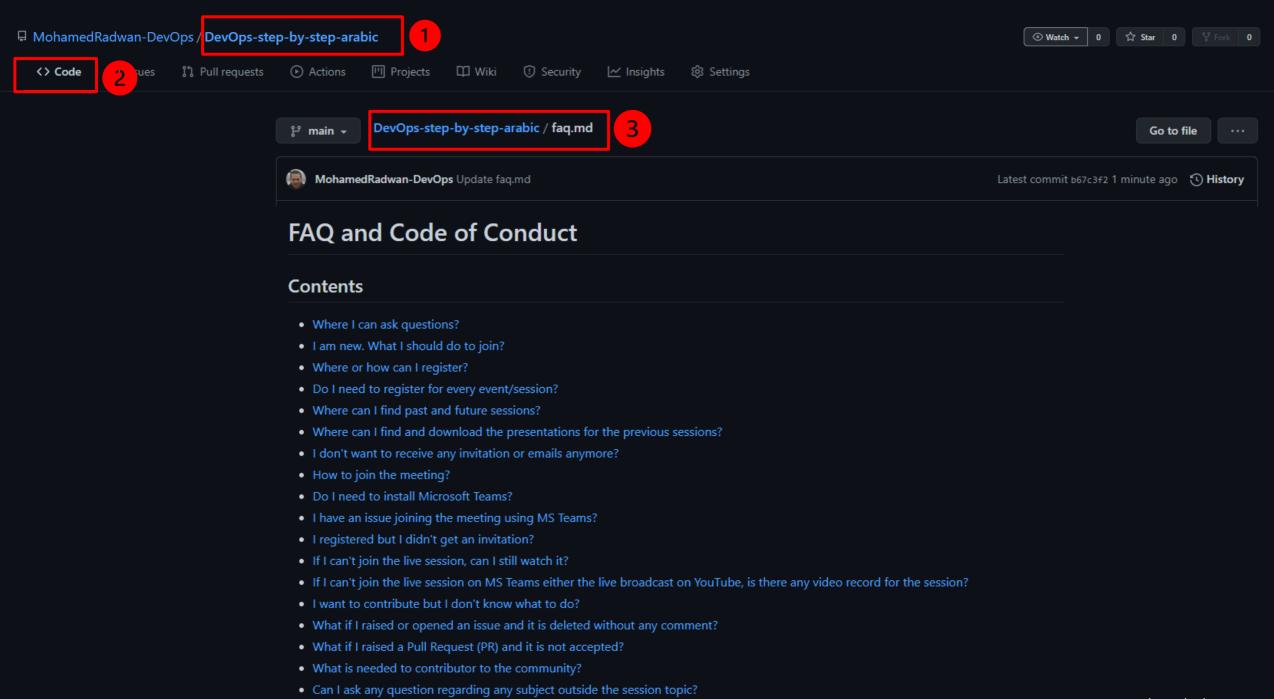

It's attention to detail that makes the difference between average and stunning.

-Francis Atterbury

Decisions based on feedback, interactivity and performance

- The session will be every 2 weeks
- The session duration will be maximum 2 hours
- The session time will be at 7:30 PM Cairo time

Roadmap?

Part of my thesis in Agile 11 years ago

Confidence in planning was short lived. By the late 1970s, the other voices could be heard.

Those who said they make plans, and its work are liars [4].

The term planning is none; everything can change in blink of eye [4].

And by 1993, Professor Henry Mintzberg wasn't limiting himself to the observations that planning didn't work and was therefore useless. He went further and judged planning as **positively harmful.**

Planning schemes don't just fail to encourage the flexibility that is necessary for success in modern business **they actually suppress**. [5]"

^[5] Routledge [5] Byrne, D (1998). "Complexity Theory and the Social Sciences: An Introduction." London: Routledge.

Always remember, there is a very thin line between Agile and Chaos.

Mohamed Radwan

Good question?

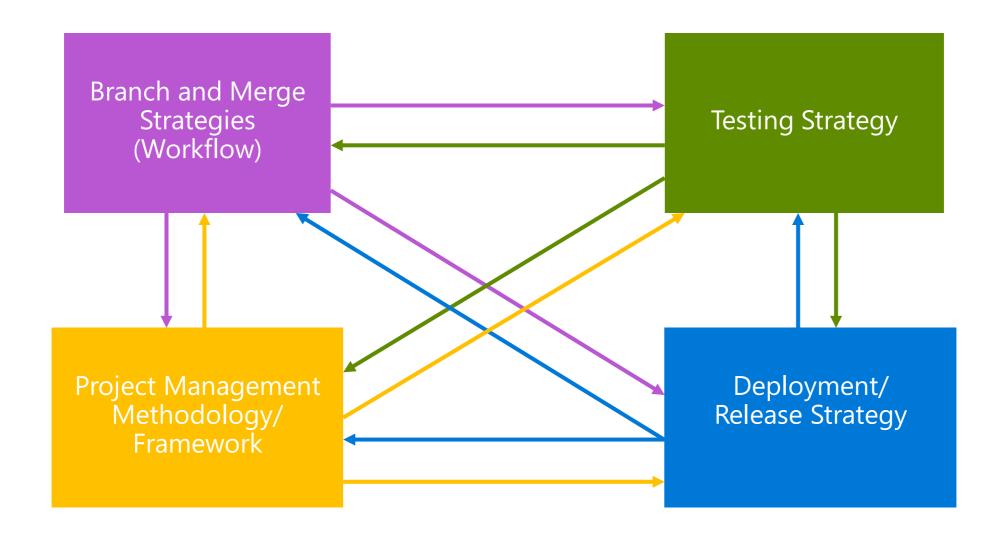

Questions from previous session?

Tag (Commands)

Branch and Merge Strategies (Workflow)

Branch strategy interdependent

Why do you create a branch?

There are many reasons and types of branches but let's focus on one of the most common and important one.

Feature Branch

An isolation copy and space to complete your work (Task) without affecting/interrupting the original source until you finish and we make sure your work is done correctly.

When do you create and merge a feature branch?

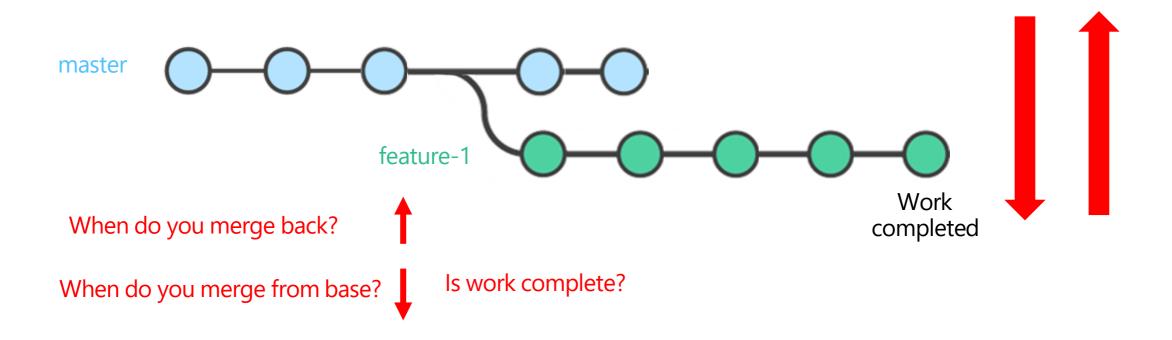

When do you create a feature branch?

When do you merge back a feature branch?

When you start working on a task

When you finish/complete working on that task

When do you merge a feature branch?

When do you merge a feature branch? (Visualization)

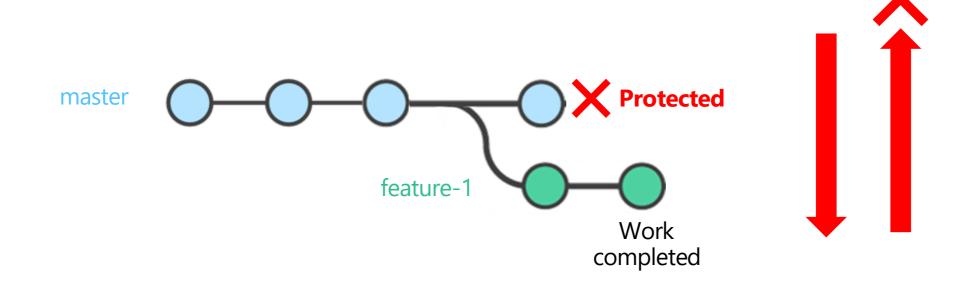

Following this practice, where the conflict will occur? And why?

What does it mean if the conflict occur in the master branch?

Pull Request (PR)

Pull Request (PR)

Open/Raise a Pull Request (PR)

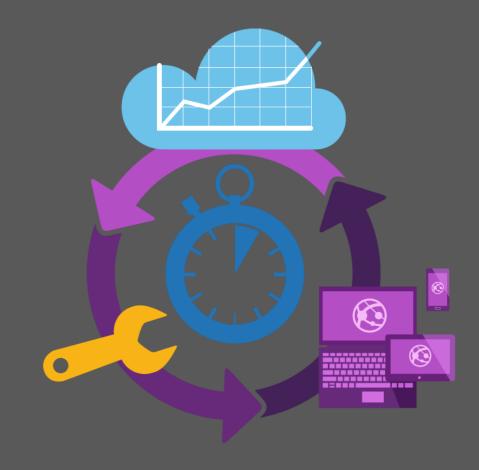

Git reset (revert)

Three actions to create a commit

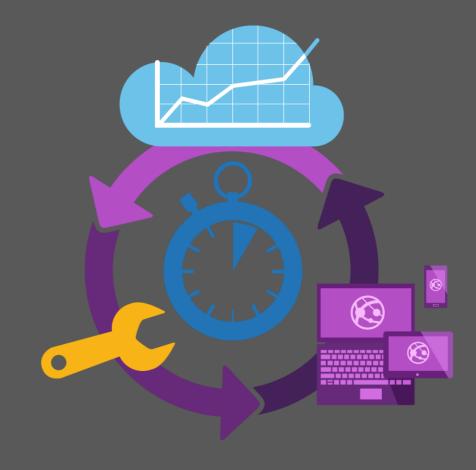

- 1. Make some changes. (hard)
- 2. git add . (mixed) (default)
- 3. git commit -m "I did something" (soft)

soft "pretended" to never see you have did git commit. **mixed** "pretended" to never see you have did git add . **hard** "pretended" to never see you have made file changes.

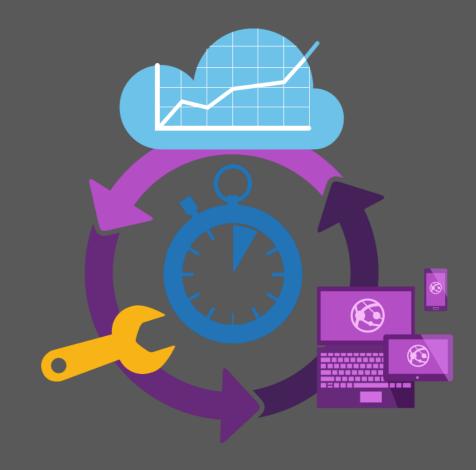

Git reset (Visualization)

Git reset and cherry-pick (Visualization)

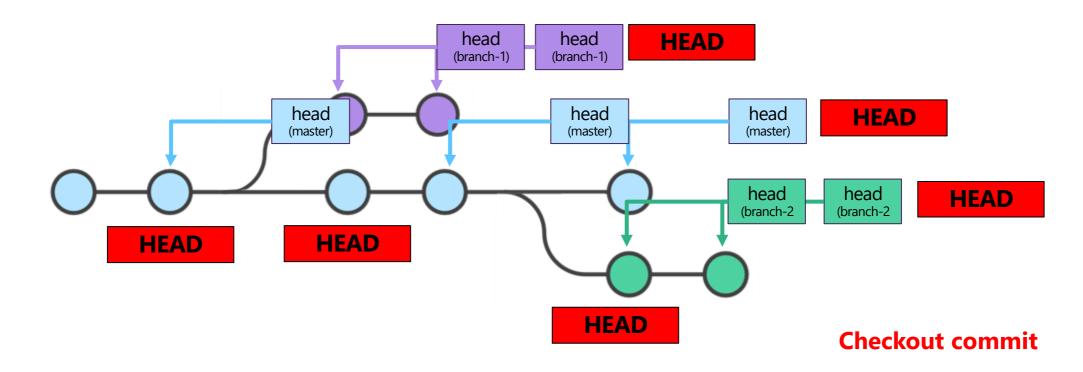

Git reset (Commands)

Detach HEAD vs. Reset (head)

Detach HEAD vs. Reset (head)

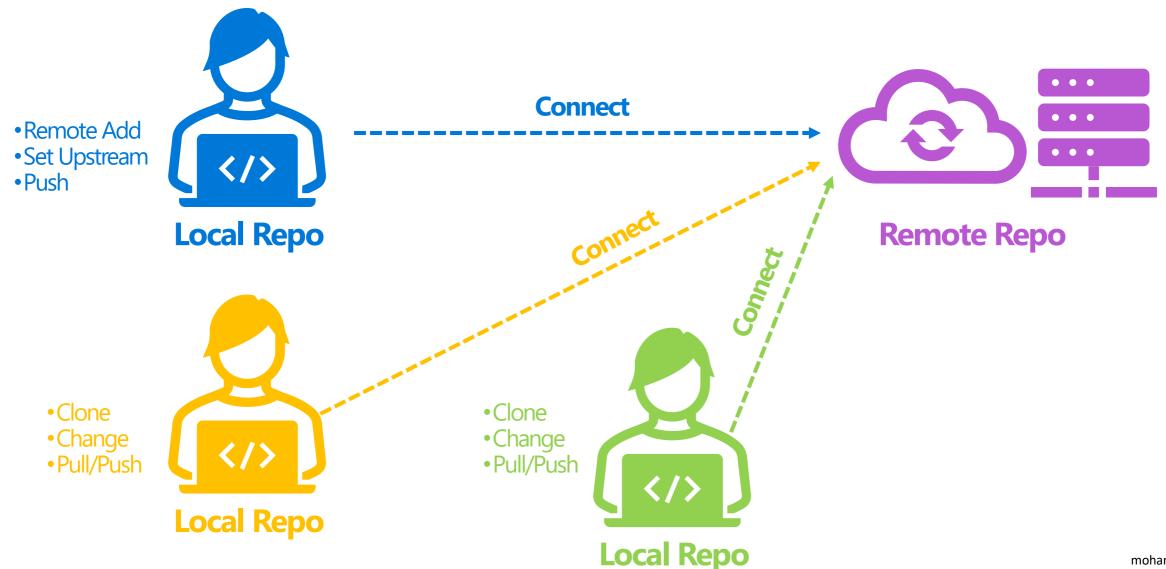

Reset Checkout branch

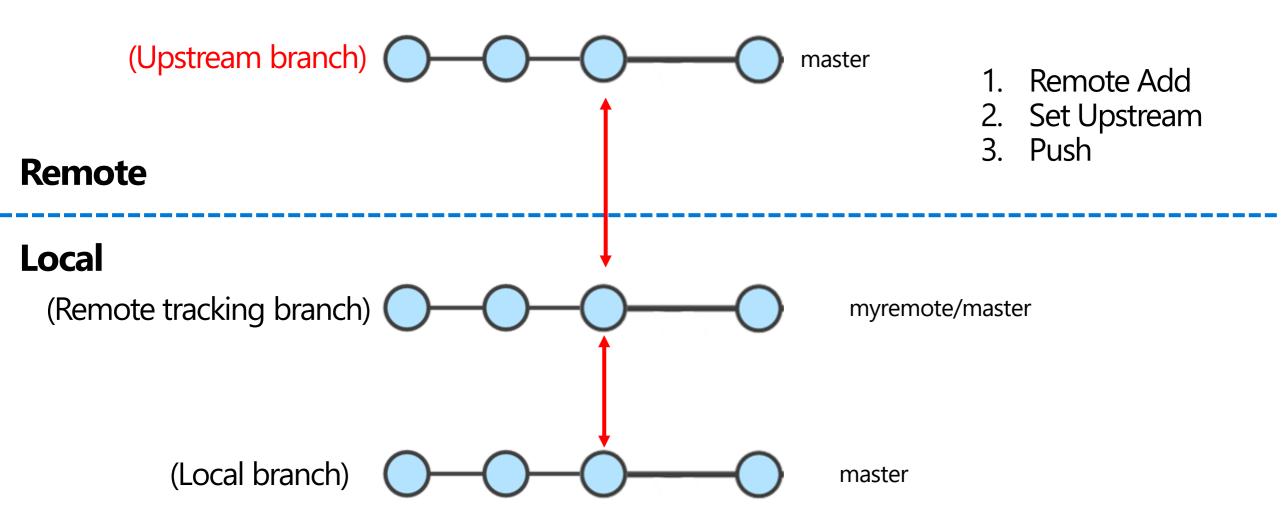

Squash/Cherry-pick (Command)

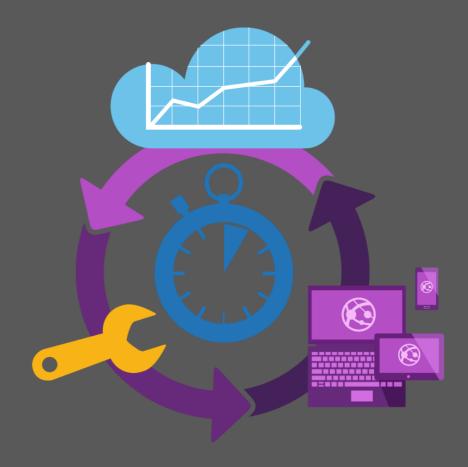

Remote Repo

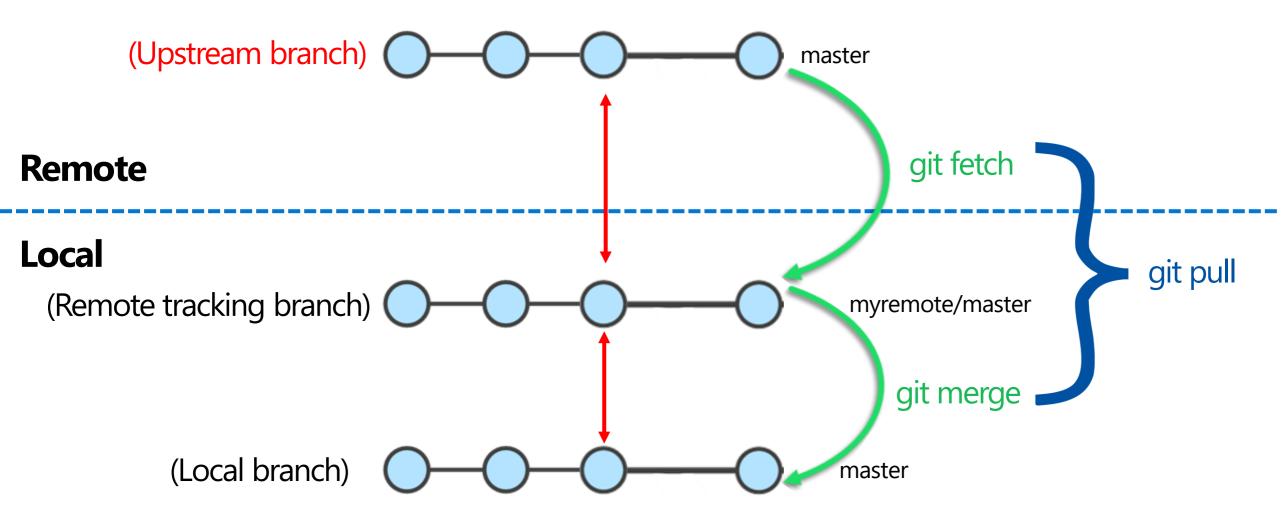

Git Remote and Upstream branch

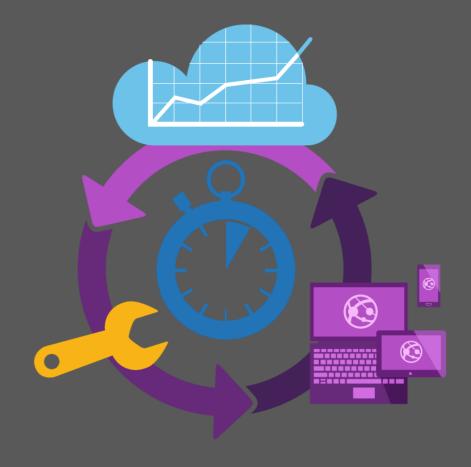

Git remote (add/upstream)

Fetch vs. Pull

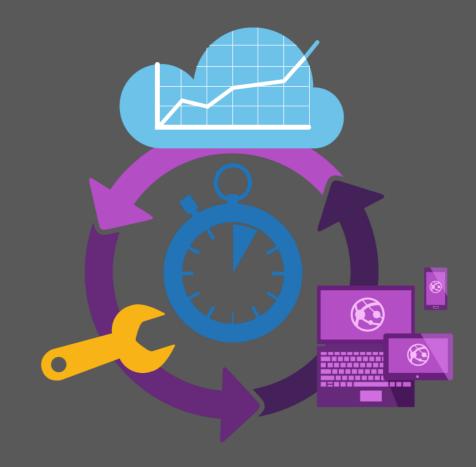

Git Fetch vs. Pull (commands)

Git Web UI for history/diff/commits/tags

Git remote (clone)

Pull Request (PR) info

- Title/Description/Requester
- Active/Closed
- File changed (number/diff)
- Commits (number/diff)
- Changes in each file changed

Pull Request (PR) from branch Azure DevOps

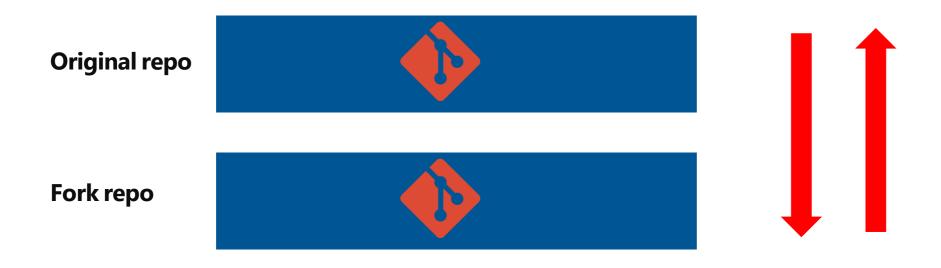

Git Fork

- Open Source
- Inner Source

Pull Request (PR)

When do you merge fork?

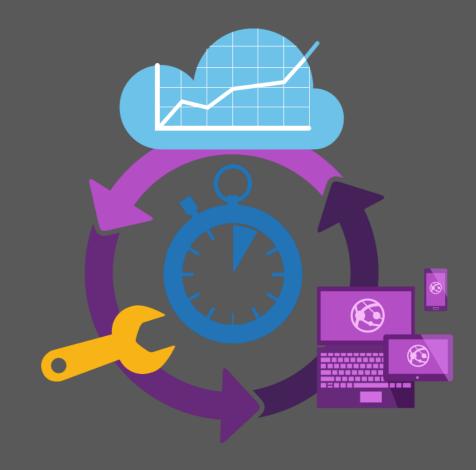

When do you merge back?

When do you merge from original?

Following this practice, where the conflict will occur? And why?

What does it mean if the conflict occur in the original repo?

Git fork (GitHub)

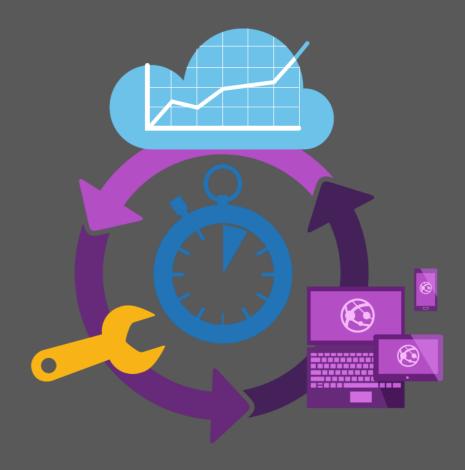

Pull Request (PR) from fork (GitHub)

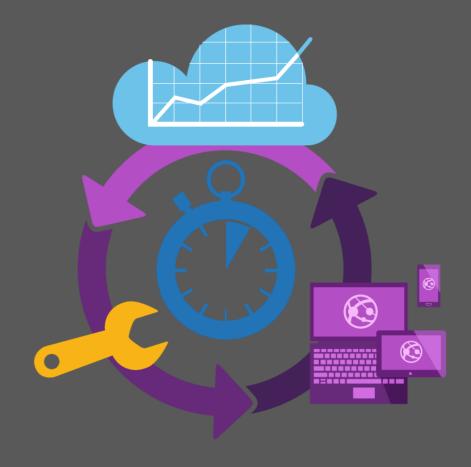

Git conflict (GitHub)

Git conflict (Azure DevOps)

Git UI with Visual Studio

Next session material

Posts

Next session checklist

- Apply and practice everything you learned in this session.
- Any questions/problems, report them on GitHub as issues.
- Well prepare/study the material of the next session.
- Well prepare your questions/problems of the next session.
